Position

Junior QA Automation

Scenario

Create a Selenium scenario with the following steps:

- enter Gmail mailbox
- create a new email with a subject and body
- send to the same mailbox

* Verify that the email received and containing the proper subject and body

Use folders/project structure as you would use for a real project. Results should also be stored in a separate file with a report (no matter how complex, the simplest one will be ok).

It would be great if you add your project to the GitHub repository and then provide a link to it.

Reminder

Once you have completed the Challenge, please email it back to Anastasiia Kot at anastasiia@geocomply.com. We will then schedule a time for you to present your information.

Thank you, and Good Luck!
